DATA SHEET - LIFTING CLAMP FOR COPPO DEL BORGO ROOF TILES

Lifting clamps

Lifting clamp for Coppo del Borgo roof tiles

Lifting clamp for "Coppo del Borgo" mineral roof tiles

The Coppo del Borgo lifting clamp is a lifting device specifically designed for handling packs of Coppo del Borgo roof tiles, allowing them to be lifted and positioned on site in a practical and safe manner.

The special configuration of the clamp is designed to fit the dimensions of Coppo del Borgo roof tiles and ensure a stable grip on the pack during lifting operations. The contact surfaces are fitted with special protective pads to provide an effective grip while reducing the risk of damaging the tiles.

The mechanical gripping system uses the weight of the load to keep the clamp securely closed during lifting, allowing simple and reliable handling by crane or other suitable lifting equipment.

The clamp is particularly suitable for roofers, construction companies and operators who need to transfer roof tiles directly from ground level to the roof, reducing manual handling operations.

Upon request, the clamp can be supplied complete with a safety net to increase safety during lifting operations at height.

All our clamps are manufactured and tested in accordance with UNI EN 13155, UNI EN ISO 12100, UNI EN 13854, ISO 8686 and UNI EN 10204 standards and are supplied with the appropriate identification label, certificate of conformity, and operation and maintenance manual. All our products are covered by a one-year warranty (European Directive).
